BioViL

“Transforming Waste to HOPE”

Pankaj Sharma

THE PROBLEM

A Farmer and the Farm

26.4 metric
tons annually

*wood burned
to cook the feed*

33+

*organic waste
generated*

~250
kg/day

1.386 metric
tons annually

79 € / month

...and this is the story of just ONE farmer

80M

rural farmers rely
on livestock for
Income [1]

67% of rural
households burn
firewood/dung
for cooking [2]

\$18B

annual
health and
environmental
cost [3]

And we realized...

- ❑ Potential to generate **477 TWh of electricity** – enough to power **100 million rural homes** [1]
- ❑ A **single** biogas (small family size) plant reduces **9.7 tons of CO₂** every **year**.

BUT...

- ❑ The existing biodigesters often fail not due technology, but **lack of motivation** and/or **operational mismanagement** of the digester.
- ❑ The **existing** supportive programs ignore **farm infrastructure** and **farmer profits**, leading to **abandoned systems**.

The BioViL SOLUTION

We
empower **rural communities** with a unique **3-step approach**:

IMPLEMENT

AWARE

EDUCATE

The Model

We not only realize solutions, but we develop

Farm-to-Business Ecosystems,

unique to every farm, to achieve:

- Revenue for Farmers
- Carbon-Credits
- Surplus off-take

Our IMPACT

“From Community to Community: Empowering Local Solutions for a shared future”

KPI-1: Energy Production & Impact

Target: By mid-2026, build and run one biodigester in a pilot village.

Indicator(s): – Monthly gas yield

- Share of biogas used onsite – self-sufficiency rate
- Measurable CHG reductions

KPI-2: Economic Viability & Growth

Target: Achieve an LCOE (Levelized Cost of Energy) at least 30% below LPG/firewood.

Indicator(s): – Revenue generated from grid feed-in.

- End-User Cost Savings.
- New Expressions of Interest or Expansions.

KPI-3: Community Engagement & Adoption

Target: Onboard two additional farms within two years (by 2027), reflecting strong local interest.

Indicator(s): – Number of sign-ups after demos/workshops.

- Participant satisfaction rate.
- New local partnerships.

Our JOURNEY

PANKAJ SHARMA

FOUNDER

Renewable Energy and E-Mobility Engineer

EDWARD ANTWI

PRINCIPLE ADVISOR

Expertise in Circular Economy, CDM
Project Development, Green Technoloiges
and Environmental Policies

FINANCES

Materials

- Bricks, cement, sand, gas storage, piping valves, slurry storage pit.

€ 6500

Construction

- Skilled builders, supervisors

€ 3000

Equipment

- Biogas generator, Gas stove, pressure regulators, pH, and gas meters, testing kits

€ 8000

Training & Contingency

- Village workshops, operation and maintenance trainings.

€ 1300

Research and Interns

- Interns for research, survey, check-ins

€ 1000

€ 19,800

Budget Breakdown
